- Rx for Vaccines to be administered in the community

Services are available at the onsite Health Center

Benefits of Travel Medicine

Keeping Teammates healthy by focusing on prevention and education

Pre-Travel Risk Assessment

Our providers take a thorough assessment of potential health risks based on the traveler's destination, accommodations, modes of transportation, their goals, the time of year, and purpose of the trip.

Prescriptions and Vaccinations

During their visit, providers ensure members understand the risk of non-vaccine preventable diseases. Our providers can provide travelers with prophylactic prescriptions or prescriptions for self-treatment if they become ill while away.

Risk Reduction Planning

Providers facilitate strategies to help reduce risk of illness through behavioral modification, prophylactic medications, vaccinations, and safety counseling.

What this means for your members:

- A convenient, one-stop-shop to ensure safe travel worldwide
- If returning home ill, providers evaluate members and facilitate treatment or external referrals, if needed
- Preparation is key and members are given the education they need if self-treatment is necessary
- Flexible, same day appointments for last-minute travelers
